

FAVOUR DIOKPO

Senior UX Specialist — Product Owner/Manager (Enterprise Platforms & Operational Systems)

Montréal, QC | (613) 501-6340 | favourdiokpo@icloud.com | [linkedin.com/in/favour-diokpo](https://www.linkedin.com/in/favour-diokpo) | [Portfolio](#)

SUMMARY

Senior UX Specialist (PO/PM hybrid) designing and evolving enterprise internal platforms across production planning, staffing governance, and executive reporting. I translate ambiguous policy, cross-role friction, and large datasets into clear, performance-aware interaction models and phased delivery plans. I align Production, HR/Talent, Finance, and Engineering to ship low-friction, decision-support tools that improve planning accuracy, transparency, and throughput across 10+ internal tools. Targeting Product Owner / Product Manager roles in complex platforms where clarity, governance, and velocity matter.

CORE STRENGTHS

- Product roadmapping & phased delivery planning
- Multi-role research & alignment (Production / HR / Finance / Engineering)
- Systems UX for complex workflows
- Governance & decision-support design (warnings over blockers, policy-constrained environments)
- Enterprise data interfaces & performance-aware UI
- Requirements clarity: rule tables, acceptance criteria, decision logs
- Cross-functional collaboration & stakeholder alignment in Agile/Scrum
- User research, requirements definition, and KPI-driven iteration
- Tools: Figma, Miro, Jira/Confluence, Tableau/Sheets, basic SQL

EXPERIENCE

Ubisoft — Senior UX Specialist (Internal Tools)

Montréal, QC | May 2021 – Present

RPM – Resource Planning & Management

- Led research across 1,000+ users to diagnose trust breakdown in a legacy planning platform (survey + interviews).
- Identified dissatisfaction patterns and high-friction workflows impacting daily users.
- Audited and standardized 40+ modals affecting staffing and Gantt planning flows.
- Redesigned navigation ribbon and core modals (Position, Request, Advanced Date Editor) to reduce cognitive load and improve predictability.
- Introduced structured flow separation for date editing to reduce user error and sync issues.
- Collaborated with a shared design system team to improve implementation consistency and reduce dev rework.

Work Arrangement – Remote Work Governance Platform

- Led cross-level research (Employees, Managers, Directors, HR committee and Governance) to uncover systemic workflow and trust gaps.
- Defined five structured approval flows replacing ambiguous legacy logic.
- Introduced accountability checkpoints before final decisions.

- Proposed templated decision messaging aligned with HR/legal constraints.
- Translated UX insights into phased product epics influencing roadmap direction.

Capacity Governance (RPM Quota Visibility)

- Defined warning-only quota model to inform hiring decisions without blocking flexibility.
- Clarified quota definitions (used, buffer, threshold, time scope) to prevent cross-studio mistrust.
- Proposed performance-aware visibility patterns for large grid datasets.
- Structured phased rollout to reduce dependency risk and preserve system responsiveness.

SELECTED IMPACT THEMES

- Rebuilt trust in high-friction internal tools through structured research and systems alignment.
- Reduced ambiguity in multi-role approval environments.
- Improved consistency across high-volume modal interactions.
- Shifted reactive UX fixes into scalable, pattern-driven solutions.

EDUCATION

- MIT — Professional Program in Applied Data Science (2022–2023)
- Carleton University — Bachelor of Information Technology (2016–2020)
- Algonquin College — Advanced Diploma, IT & Design (2016–2020)

CERTIFICATIONS

- IBM AI Product Manager 2026
- Google Project Management 2026
