

FAVOUR DIOKPO

AI Product Designer | Agentic Systems | Complex Workflows

Montréal, QC | (514) 501 6340 | favourdiokpo@icloud.com | [LinkedIn](#) | [Portfolio](#)

SUMMARY

AI Product Designer and Senior UX Specialist with five years at Ubisoft, focused on complex systems, agentic workflows, and human AI interaction. I turn ambiguous problems into clear product behavior, decision boundaries, and workflows people can trust. Founder of HERA OS, where I design AI orchestration, context, authority, verification, and review systems.

CORE SKILLS

Product systems design • Human AI interaction • Agentic workflow design • Product strategy • Systems UX • Interaction architecture • User research • Workflow mapping • Prototyping • Acceptance criteria

EXPERIENCE

HERA OS | Founder and Product Designer | 2026 to Present

- Founded and designed an AI orchestration product for nontechnical builders that turns rough intent into visible work across rooms, goals, tasks, agents, tools, context, verification, and review.
- Defined product behavior and authority boundaries for software rules, AI judgment, and human judgment, including blockers, permissions, semantic clarification, retries, parallel execution, artifact review, and task resumption.
- Designed a context and interruption model that requires agents to inspect available task, goal, decision, dependency, transcript, memory, file, and tool context before asking the user for missing meaning or decisions.
- Established a verification model that separates builder, verifier, and user authority and requires real frontend proof with meaningful tasks and inspectable outputs before work is treated as complete.

Ubisoft | Senior UX Specialist, Internal Tools | May 2021 to Present

- Led global discovery for RPM, a staffing and resource planning platform serving more than 1,000 users. Combined a 101 response satisfaction study with interviews to identify trust, navigation, and workflow breakdowns that reactive support feedback had not exposed.
- Audited more than 40 modals and redesigned navigation plus Position, Request, and Advanced Date Editor workflows, creating clearer interaction patterns across staffing and Gantt planning.
- Led cross level research for a remote work approval platform across employees, managers, directors, and HR. Defined five approval and escalation flows, accountability checkpoints, and templated decision messaging within policy and legal constraints.
- Designed hiring capacity decision support using warnings instead of hard blockers, clarified quota, buffer, threshold, and time scope definitions, and structured phased delivery around performance and dependency risk.
- Partnered with Product, Engineering, HR, Finance, and a shared design system team to turn research into product rules, roadmaps, acceptance criteria, and implementation ready UX specifications.

EDUCATION AND CERTIFICATIONS

MIT | Professional Program in Applied Data Science | 2022 to 2023

Carleton University | Bachelor of Information Technology | 2016 to 2020

Algonquin College | Advanced Diploma, IT and Design | 2016 to 2020

IBM AI Product Manager | 2026 • Google Project Management | 2026
